

# MICRO SOLAR LIGHT / OWNERS MANUAL

## ASSEMBLY AND INSTALLATION INSTRUCTIONS

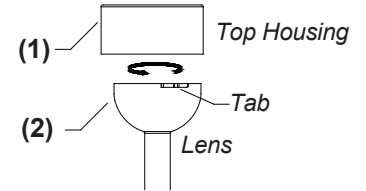

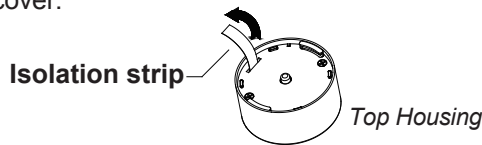

Save this for future reference

### CHOOSE THE RIGHT LOCATION:

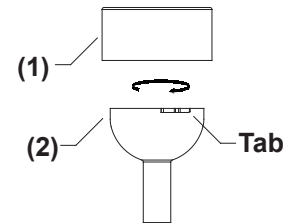

The operating time depends on geographical location, daily weather conditions and season. Select a location with full, direct sunlight. Do not install in shady areas as these areas will not allow the battery to be fully charged and will reduce night time working hours. Be sure that the selected location is not close to other night time light sources such as street lights or porch lights. These light sources may keep the solar lights from turning on automatically.

### ASSEMBLY

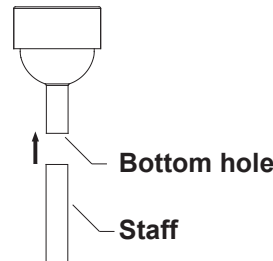

Before placing light, remove the top housing from the lens and pull off the isolation strip from the battery cover.

(To replace the solar light, align tabs on the lens with slots inside the top housing and turn top housing clockwise until tabs are secure under slots. Then push the staff / light assembly into the ground where desired.)

Insert the customized staff into the bottom hole of the lens. Then push the staff / light assembly into the ground where desired.

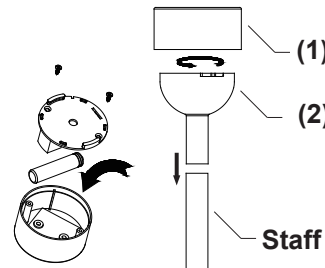

### CHARGING / REPLACING THE BATTERY

For optimum performance, it is best to install the solar lights in full sunlight and charge for 10-12 hours. Allow the light to run at least 8-12 entire charging and discharging cycles to reach battery's maximum capacity.

#### Replacing the Battery

1. Take the pole out of the bottom hole of the lens and remove the top housing from the lens.
2. Remove the screws at the bottom of the top housing and open the battery cover. Replace the old battery with a fresh 1.2V 150 mAh AAA Ni-Cd rechargeable battery. Replace the battery cover and top housing.

**CAUTION: CONTAINS NICKEL-CADMIUM BATTERY.  
BATTERY MUST BE RECYCLED OR DISPOSED OF PROPERLY.**

### 30 DAY WARRANTY

Your Micro Light is warranted for 30 days. Please contact the retail store where you bought this product with your dated receipt as proof of purchase if you experience any difficulties with this product.
